PERPENDICULAR MAGNETIC RECORDING MEDIA WITH IMPROVED CRYSTALLOGRAPHIC ORIENTATIONS AND METHOD OF MANUFACTURING SAME

ABSTRACT OF THE DISCLOSURE

A perpendicular magnetic recording medium, comprising:

- (a) a non-magnetic substrate having a surface; and
- (b) a layer stack formed over the substrate surface, comprising in overlying sequence from the substrate surface:
 - (i) a magnetically soft underlayer;
 - (ii) an interlayer structure for crystallographically orienting a layer of a perpendicular magnetic recording material formed thereon; and
 - (iii) at least one crystallographically oriented magnetically hard perpendicular recording layer;

wherein the magnetically soft underlayer is sputter-deposited at a sufficiently large target-to-substrate spacing and at a sufficiently low gas pressure selected to provide the underlayer with a smooth surface having a low average surface roughness Ra below about 0.3 nm, as measured by Atomic Force Microscopy (AFM).
